

Information Technology Consultants

BayNODE is an Information Technology consulting firm based in the San Francisco Bay Area. We provide scalable IT solutions for small- and medium-sized companies and non-profit organizations, specializing in custom design, development, implementation and support of business networks and related systems.

BayNODE specialized in network design, software support, application development, security, hosting and professional business systems.

Our data network solutions include full-spectrum email, groupware, file storage, printing, remote access/remote office, electronic fax, anti-spam, and content filtering, as well as the robust network security measures you need to keep your systems safe from intruders and other threats. With our secure data warehouse, we offer additional disaster recovery systems in case an emergency affects the health of your network.

Since '04, BayNODE has been providing technical support to many clients all over U.S. We assign each of our clients a support team designed specifically for its needs.

BayNODE also provides excellent IP Telephony solutions for companies that seek to integrate voice and data networks and applications. We work with many IP Telephony vendors to design fully integrated systems, tailored to the specific needs of your business.

In addition to designing and implementing data networks, we provide an array of other custom IT services such as desktop support, portal development, web design, programming support, remote monitoring, and strategic planning.

BayNODE provides onsite support in Northern California and remote support for global clients via phone and secure remote access solutions.

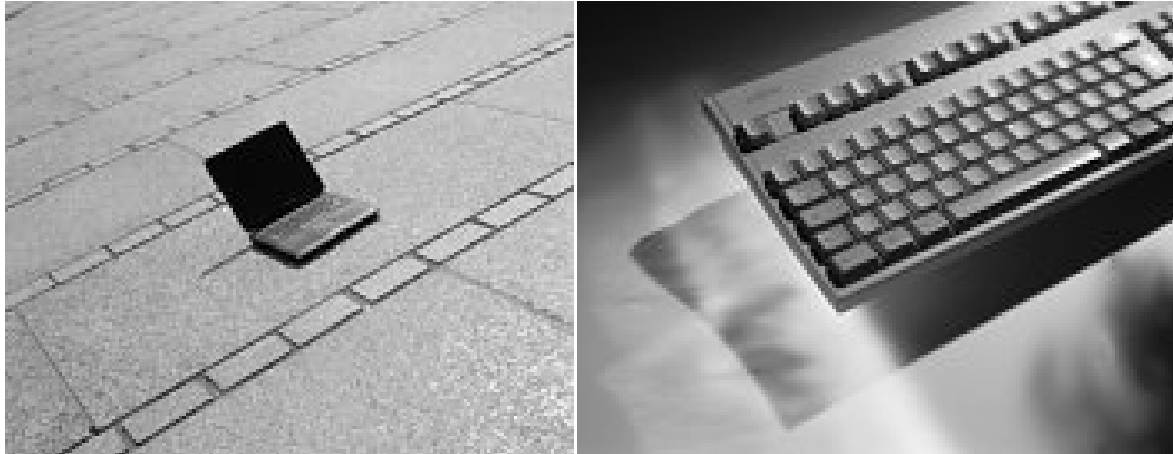

BayNODE currently offers following services...

- Network design, implementation and maintenance
- Web development
- Custom Application Development
- Phone and online remote support
- Specialized, expert-level technical consulting for IT departments
- IT security consulting
- Business Financial systems implementation and support
- Offsite Disaster Recovery systems design, maintenance and hosting
- IT staff outsourcing
- Network auditing

Networks

Networking is the foundation of any business computer system. An unreliable, under-performing network can cripple your operations. Our main goal is for your network to be as reliable for your business as your physical offices. In order to do this, we listen carefully to your needs and complaints. We then provide recommendations and budgets to address the issues and help you determine which solution will bring the biggest return to your operations.

Our first goal is to stabilize you're your current operations. We will review your network to determine its strengths and weaknesses. If any hardware components are unreliable or overloaded, we will recommend their replacement or the purchase of additional systems. If the operating systems are not stable, we will adjust their operation, apply patches, and if necessary reinstall to achieve reliable operation.

BayNODE is constantly reviewing and evaluating new networking technologies. We only recommend proven, reliable systems to our clients.

Data Networks

Design, implementation, management and maintenance of Microsoft Windows and Linux based systems

Networking

Management of a wide variety of routing and switching equipment from respected vendors such as ProCurve, Cisco and IBM

Network Security

Design, installation and maintenance of high-end security solutions such as Sonicwall, Cisco PIX and Barracuda Mail Filters

Converged IP Phone Systems

Design and implementation of Unified IP Telephony systems such as ShoreTel and Cisco

Remote Office

Installation, management, and support of industry-leading remote office solutions such as Citrix Presentation Server and Microsoft Terminal Server

Portal Solutions

Implementation and customization of web-based data access portal systems such as Microsoft Office SharePoint Server

Instant Messaging Systems

Installation, setup and maintenance of Microsoft Live Communication Server and Jabber Instant Messenger

Electronic Faxing

Installation and integration of GFI Faxmaker systems

Off-Site Disaster Recovery

Design and hosting for business continuity and mirrored data solutions

Failover Solutions

Implementation of failover solutions for storage and application servers by vendors such as Microsoft Clustering and NeverFail

We work with your staff to find out exactly what your needs are. We then recommend specific hardware and software that will meet your requirements. We can provide cost estimates and refer you to reputable vendors in your area.

We are network specialists. If you require a computer network, we can connect your existing PCs to a local or wide area network. We implement cross-platform communications so your systems can talk to the rest of the world.

We work with your vendor so that your hardware is installed correctly. We will install and configure the software so your staff can start using the system immediately. Our staff will make sure that *any* problems are resolved quickly.

We supply ongoing support. We are available for telephone or on-site training and trouble shooting. We install new programs and updates. Our job is to help you get the most out of your system.

For businesses not completely satisfied by off-the-shelf software, we modify accounting software & database systems. We also design and write custom programs for clients with unique needs.
